### **DETAILED ACTION**

1. Acknowledgment is made of applicant's amendment and 3-month extension of time, which were received by the Office on January 12, 2006.

2. Claims 1-37 are canceled. Claims 38-44 have been added.

#### ***Specification***

3. In view of the applicant's modifications to the specification, the Examiner is withdrawing the objection, which was made against the specification in the last Office action.

#### ***Claim Rejections - 35 USC § 102***

4. In view of applicant's claim cancellation, the Examiner is withdrawing the 35 U.S.C 102(b) rejection of Otten '439 or Spehr et al '433, which was made against claim 1 in the last Office action.

#### ***Double Patenting***

5. In view of applicant's cancellation of claim 1, the Examiner is also withdrawing the statutory double patenting rejection (35 U.S.C 101), which was made against this claim in the last Office Action.

#### ***Allowable Subject Matter***

6. Claims 38-41, 43, and 44 are allowed. See Examiner's Amendment below.

***Examiner's Amendment***

7. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Roland McAndrews on March 10, 2006.

8. The application has been amended as follows:

- Line 1 of claims 38-41, 43, and 44, after each claim number, please insert the status identifier "(New)", and
- Cancel claim 42 (claim 42 was substantially the same as claim 43).

***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The Westlund et al (US 6,671,560) patent, applicant's parent application, was considered for double-patenting purposes but not found to be applicable since it differed by failing to specify in its claim language the use of an expandable "braided mesh material" in its removal wire.

The Gambale (US 5,365,944) patent describes a guidewire having a pertinent frictional engagement structure at its distal end (Figs.4-6). Unlike applicant's device, that of Gambale is not used for engaging the lumen of an intravenous lead, but rather for frictional engagement to another guidewire as an extension. Additionally, the reference does not disclose the use of an expandable "braided mesh material" in a removal wire.
